Paradoxical polyembryony? Embryonic cloning in Poecilia (Poeciliidae, Teleostei) 169

Male mate choice and sperm allocation in a sexual/asexual mating complex of Poecilia (Poeciliidae, Teleostei) 167

Working-class royalty: bees beat the caste system 129

Malaria parasite growth is stimulated by mosquito probing 185

Impact of fever on locust life-history traits: costs or benefits? 181

T. W. Pike & M. Petrie

On parasitoid reproduction in Polistes dominulus 113

S. L. Elliott, C. M. Horton, S. Blanford & M. B. Thomas

The ecology and evolution of patience in two Macaca (Cercopithecidae) 219

M. F. Haussmann, D. W. Winkler & C. M. Vleck

Offspring sex ratio is related to paternal train elaboration and yolk corticosterone in peacock T. W. Pike & M. Petrie 204

The taxonomic feedback loop: symbiosis of Caenorhabditis elegans and its bacterial population 139

M. Pook, D. Thiele & M. A. Hindell

Incipient organizers in the development of the Amazonian red-bellied piranha 155

The evolution of a conjugative plasmid and its ability to increase bacterial fitness 250

