

GUIDANCE FOR AUTHORS

Selection criteria

The criteria for selection are scientific excellence, originality and interest across disciplines within biology. Papers are assessed by the Editorial Board for suitability before full peer-review. Their recommendations are passed to the Editor. The Editor is responsible for all editorial decisions and he makes these decisions based on the reports received from the referees and the Editorial Board.

Publishing format

Biology Letters are published regularly online and in bimonthly print issues. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although the printed version of *Biology Letters* is limited to 2500 words, there is the facility for Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs. However, the printed version must include enough detail to satisfy most non-specialist readers. Supplementary data up to 10Mb is placed on the Society's website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

Conditions of publication

Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the mass media. Like many journals *Biology Letters* employs a strict embargo policy where the reporting of a scientific article by the media is embargoed until a specific time. The Editor has final authority in all matters relating to publication.

Categories

Papers published in *Biology Letters* will be categorised by subject, which include

- animal behaviour
- biomechanics
- community ecology
- conservation biology
- evolutionary biology
- evolutionary developmental biology
- genome biology
- global change biology
- marine biology
- molecular evolution
- neurobiology
- palaeontology
- pathogen biology
- phylogeny
- physiology
- population ecology
- population genetics

Electronic Submission details

The Royal Society's electronic-submission and peer-review service provides *Biology Letters* authors with the facility to submit their papers online. The service allows you to upload files in a reliable and user-friendly way, using a Web-based system. When your paper is received, an immediate acknowledgement is sent that details how you can track your contribution online.

For full submission guidelines and access to all journal content please visit the *Biology Letters* website, see rsbl.royalsocietypublishing.org for further details.

The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Society has three roles, as the scientific academy of the United Kingdom, as a learned society, and as a funding body.

The objectives of the Royal Society are to

- recognise excellence in science
- support leading-edge scientific research and its applications
- stimulate international interaction
- further the role of science, engineering and technology in society
- promote the public's understanding of science
- provide independent authoritative advice on matters relating to science, engineering and technology
- encourage research into the history of science

For further information on the Society's activities, please contact the following departments on the extensions listed by dialling +44 (0)20 7839 5561, or visit the Society's Web site (royalsociety.org).

Research Support (UK grants and fellowships)

Research appointments: 2547

Research grants: 2539

Conference grants: 2540

Science Advice

General enquiries: 2585

Science Communication

General enquiries: 2572

International Exchanges (for grants enabling research visits between the UK and most other countries (except the USA))

General enquiries: 2550

Library and Information Services

Library/archive enquiries: 2606

Cover image: A parasitoid wasp *Cotesia glomerata* is attacking host caterpillars, *Pieris brassicae*. The aggressive defense of the host caterpillars often disturb the oviposition behaviour of the wasp (see pages 197–199; photo courtesy of Shingo Tanaka, Hokkaido University).
