

## Meeting report

- 289 **New frontiers in biologging science**  
C. Rutz & G. C. Hays

## Animal behaviour

- 293 **Design complexity in termite-fishing tools of chimpanzees (*Pan troglodytes*)**  
C. Sanz, J. Call & D. Morgan
- 297 **The beluga whale produces two pulses to form its sonar signal**  
M. O. Lammers & M. Castellote
- 302 **Stopover decision during migration: physiological conditions predict nocturnal restlessness in wild passerines**  
L. Fusani, M. Cardinale, C. Carere & W. Goymann
- 306 **Behavioural phase polyphenism in the Australian plague locust (*Chortoicetes terminifera*)**  
L. J. Gray, G. A. Sword, M. L. Anstey, F. J. Clissold & S. J. Simpson
- 310 **Bumble-bees learn the value of social cues through experience**  
E. Leadbeater & L. Chittka
- 313 **Social structure influences extra-pair paternity in socially monogamous mammals**  
A. Cohas & D. Allainé

## Biomechanics

- 317 **Opinion piece. Raising the sauropod neck: it costs more to get less**  
R. S. Seymour

## Conservation biology

- 320 **Reduced heterozygosity impairs sperm quality in endangered mammals**  
J. L. Fitzpatrick & J. P. Evans
- 324 **Geographically extensive hybridization between the forest trees American butternut and Japanese walnut**  
S. M. Hoban, T. S. McCleary, S. E. Schlarbaum & J. Romero-Severson
- 328 **Hybridization rapidly reduces fitness of a native trout in the wild**  
C. C. Muhlfeld, S. T. Kalinowski, T. E. McMahon, M. L. Taper, S. Painter, R. F. Leary & F. W. Allendorf

## Evolutionary biology

- 332 **Opinion piece. On the problems of a closed marriage: celebrating Darwin 200**  
J. R. Pannell
- 336 **Human kin recognition is self- rather than family-referential**  
P. Bressan & G. Zucchi
- 339 **Trade-off between age of first reproduction and survival in a female primate**  
G. E. Blomquist

- 343 **Comment. Free radicals run in lizard families: a mitochondrial uncoupling phenomenon or not?**  
F. Criscuolo & F. Bouillaud
- 345 **Invited reply. Free radicals run in lizard families without (and perhaps with) mitochondrial uncoupling**  
M. Olsson, M. Wilson, T. Uller & C. Isaksson

## Genome biology

- 347 **The genome sizes of megabats (Chiroptera: Pteropodidae) are remarkably constrained**  
J. D. L. Smith & T. R. Gregory

## Global change biology

- 352 **The scaling of green space coverage in European cities**  
R. A. Fuller & K. J. Gaston
- 356 **Reduced abundance of insects and spiders linked to radiation at Chernobyl 20 years after the accident**  
A. P. Møller & T. A. Mousseau

## Marine biology

- 360 **Ockham's razor gone blunt: coenzyme Q adaptation and redox balance in tropical reef fishes**  
M. Gagliano, W. C. Dunlap, R. de Nys & M. Depczynski
- 364 **Stable isotopes document the trophic structure of a deep-sea cephalopod assemblage including giant octopod and giant squid**  
Y. Cherel, V. Ridoux, J. Spitz & P. Richard

## Neurobiology

- 368 **Tiger moths and the threat of bats: decision-making based on the activity of a single sensory neuron**  
J. M. Ratcliffe, J. H. Fullard, B. J. Arthur & R. R. Hoy

## Palaeontology

- 372 **Stem sarcopterygians have primitive polybasal fin articulation**  
M. Zhu & X. Yu
- 376 **Function and hydrostatics in the telson of the Burgess Shale arthropod *Burgessia***  
J.-P. Lin

## Physiology

- 380 **Comment. Comment on Coomes *et al.* 'Scaling of xylem vessels and veins within the leaves of oak species'**  
C. A. Price & B. J. Enquist
- 381 **Invited Reply. Response to comment on Coomes *et al.* 'Scaling of xylem vessels and veins within the leaves of oak species'**  
D. A. Coomes & L. Sack

## Population ecology

- 383 **A tiger cannot change its stripes: using a three-dimensional model to match images of living tigers and tiger skins**  
L. Hiby, P. Lovell, N. Patil, N. S. Kumar, A. M. Gopalaswamy & K. U. Karanth

## Population genetics

- 387 **Landscape modelling spatial bottlenecks: implications for raccoon rabies disease spread**  
E. E. Rees, B. A. Pond, C. I. Cullingham, R. R. Tinline, D. Ball, C. J. Kyle & B. N. White

## Special feature

### Whole organism perspectives on understanding molecular evolution

Guest edited by Lindell Bromham

- 391 **Introduction. Putting the 'bio' into bioinformatics**  
L. Bromham
- 394 **Upper-limit mutation rate estimation for a plant RNA virus**  
R. Sanjuán, P. Agudelo-Romero & S. F. Elena
- 397 **Modelling mitochondrial site polymorphisms to infer the number of segregating units and mutation rate**  
M. D. Hendy, M. D. Woodhams & A. Dodd
- 401 **Opinion piece. Why do species vary in their rate of molecular evolution?**  
L. Bromham
- 405 **Evolutionary rate variation in Old World monkeys**  
N. Elango, J. Lee, Z. Peng, Y.-H. E. Loh & S. V. Yi
- 409 **Opinion piece. Are sex-biased genes more dispensable?**  
J. E. Mank & H. Ellegren
- 413 **Mitochondrial whims: metabolic rate, longevity and the rate of molecular evolution**  
N. Galtier, R. W. Jobson, B. Nabholz, S. Glémin & P. U. Blier
- 417 **Opinion piece. Effective population size and the rate and pattern of nucleotide substitutions**  
M. Woolfit
- 421 **Opinion piece. An examination of phylogenetic models of substitution rate variation among lineages**  
S. Y. W. Ho
- 425 **Inferring evolutionarily significant units of bacterial diversity from broad environmental surveys of single-locus data**  
T. G. Barraclough, M. Hughes, N. Ashford-Hodges & T. Fujisawa
- 429 **The  $\alpha$ -proteobacteria: the Darwin finches of the bacterial world**  
T. J. G. Ettema & S. G. E. Andersson

Founded in 1660, the Royal Society is the independent scientific academy of the UK, dedicated to promoting excellence in science
