GUIDANCE FOR AUTHORS

Selection criteria
The criteria for selection are scientific excellence, originality and interest across disciplines within biology. Papers are assessed by the Editorial Board for suitability before full peer-review. Their recommendations are passed to the Editor. The Editor is responsible for all editorial decisions and he makes these decisions based on the reports received from the referees and the Editorial Board.

Publishing format
Biology Letters are published regularly online and in bimonthly print issues. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although the printed version of Biology Letters is limited to 2500 words, there is the facility for Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs. However, the printed version must include enough detail to satisfy most non-specialist readers. Supplementary data up to 10MB is placed on the Society’s website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

Conditions of publication
Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the main media. As many journals, Biology Letters employs a strict embargo policy where the reporting of a scientific article by the media is embargoed until a specific date. The Editor has full authority in all matters relating to publication.

For full submission guidelines, further details about the journal and access to all journal content please visit the Biology Letters website at rbl.royalsociety.org publishing.

The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Society has three roles, as the scientific academy of the United Kingdom, as a learned society, and as a funding body.

The objectives of the Royal Society are to
• recognise excellence in science
• support leading-edge scientific research and its applications
• stimulate international interaction
• further the science, engineering and technology in society
• promote the public’s understanding of science
• provide independent authoritative advice on matters relating to science, engineering and technology
• encourage research into the history of science

Cover image: A mountain tree shrew (Tupaia montanai) climbs onto a pitcher of Nepenthes jamei on Mount Mulu, Borneo. Tree shrews feed on nestor produced by the pitchers and lid deicate into the pitchers. Faces represents an important source of supplementary nitrogen in its diet. biography

Biology Letters

Editor
Professor Brian Charlesworth
Publishing Editor Fiona Pring

Editorial Board
Brian Charlesworth, Editor
School of Biological Sciences, University of Edinburgh

Climate Change and Biodiversity Division, South African National Biodiversity Institute
Andrew Brummitt
Concordia Station, Harvard University

Daniel Browning
Department of Ecology and Evolutionary Biology, University of California, Los Angeles

Lindell Bromham
School of Botany and Zoology, Australian National University

John Brownfield
School of Biological Sciences, University of Nottingham

Rob Brooks
School of Biological Sciences, University of New South Wales

Richard Byrne
School of Psychology, University of St Andrews

Jossy Cull
Mara Research Institute for Evolutionary Anthropology

Chris Catagni
School of Biological Sciences, University of East Anglia

Pål Clasen
Alma Afrope Science Center, National Marine Mammal Laboratory

Tom Daniel
Biology Department, University of Washington

Leonard Morentz
Bioscience Institute, University of Beppu

Fiona Pring
Department of Biological Sciences, Duke University

Jossy Cull
Mara Research Institute for Evolutionary Anthropology

Chris Cliffe
Wellcome Department of Cognitive Neurology, University College London

Jacques Gauthier
Division of Neuroethological Ecology, Yale University

Jessica Guevitch
Department of Biology and Evolution, Stony Brook University

Daniel Heydon
Division of Environmental and Biological Sciences, University of Glasgow

Joan Herbers
Department of Evolution, Ecology and Organismal Biology, University of California, Berkeley

Toby Johnson
Roth Institute, Roden Bossteert

Lukas Keller
Zoologisches Museum, Universitat Zürich

Stephan Kremer
Department of Mathematics, North Carolina State University

Johanna Maugeri
Department of Biological and Environmental Science, University of Umeå

Chris Margrie
Sustainable Ecosystems, CBSS

Daniel Morrell
Department of Biological Sciences, University of Windsor

Charles Neave
Prospective, Max Planck Institute for Evolutionary Anthropology, Leipzig

Sarah Otto
Department of Biology, University of British Columbia

John Partridge
Department of Plant Sciences, University of Oxford

Andrew Randell
Institute of Evolutionary Biology, University of Edinburgh

Mark Rasson
School of Biological Sciences, Queen’s University Belfast

Mike Ritchie
Institute of Evolutionary and Environmental Biology, University of St Andrews

Paul Schmid-Hempel
Empyrean Biologica, Fitchburg, WI

Ofir Shafer
Institute of Zoology, University of British Columbia

Richard Shine
Department of Biological Sciences, University of Sydney

Tom Smulders
School of Biology, University of Nottingham

Paul Sniegowski
Department of Biology, University of Pennsylvania

John Speakman
Institute of Biological and Environmental Sciences, University of Aberdeen

John Stachowicz
Section of Evolution and Ecology, UC Davis

Wilfried Thaller
Laboratoire d’Ecologie Alpine, CNRS

Daniel Mennill
Department of Biological and Environmental Science, University of Jyväskylä

Alun Lloyd
Department of Evolution, Ecology and Organismal Biology, Ohio State University

Toby Johnson
Roth Institute, Roden Bossteert

Guidelines for submission
Biology Letters is a primarily online, peer-reviewed journal that publishes short, high-quality articles from across the breadth of the biological sciences. Biology Letters is a multi-disciplinary journal, and the selection criteria are broad. The scope of Biology Letters is vast: publishing high-quality research articles and opinion pieces in any area of the biological sciences. Biology Letters is a primarily online, peer-reviewed journal that publishes short, high-quality articles from across the breadth of the biological sciences. Biology Letters is a primarily online, peer-reviewed journal that publishes short, high-quality articles from across the breadth of the biological sciences.
