Meeting report

Stable isotopes on ecosystem function: challenging or challenging?

Meeting report

Control and dynamics of animal movement

Guest edited by Andrew Biewener & Thomas Daniel

Evolutionary biology

414 Behavioural asymmetry affects escape performance in a teleost fish

418 Two explanations for the compliant within-wingbeat damping: dynamics of animal locomotion

422 Within-wingbeat damping: dynamics of animal locomotion

430 Sexual conflict and sex allocation

430 Sexual conflict and sex allocation

23 June 2010

volume 6

number 3

pages 287–430

Biol. Lett. | vol. 6  no. 3  pp. 287–430 | 23 Jun 2010

volume 6  number 3  pages 287–430

287 Stable isotope views on ecosystem function: challenging or challenging?

290 Animal behaviour

292 Building a home from foam—Anghara frog foum nest architecture and three-phase construction process

297 How hazardous is the Sahara Desert crossing for migratory birds?

299 Social foraging: mixed strategies in a clonal ant context-dependent aggressiveness

301 The effects of familiarity and social decision-making in a social fish

304 Shrewd alliances: mixed foraging

307 Is it only humans that count from left to right?

314 Is quality more important than quantity? Insect behavioural responses to changes in a volatile blend after 90 days

318 Group provisioning limits sharing

322 Turgid female toads give males the slip:

325 The police are not the army:

329 Comment: Exposure to seismic survey alters blue whale acoustic communication

332 A banned variety was the mother of several major wine grapes

334 Invited reply. Exposure to seismic survey alters blue whale acoustic communication

337 Introduction. A moving topic: control and dynamics of animal movement

346 Ageing and thermal performance in Carnivora?

349 Common toad (Bufo bufo) ability to change its shape and size in response to looming predators

352 Evolution of ultraviolet vision in showsbirt (Charadriiformes)

354 Posterior lateral line afferent neurons enhance by standing flight velocity

357 Functional anatomy of the skins of hatchling sea turtles

367 A banned variety was the mother of several major wine grapes

370 Evolution of ultraviolet vision in showsbirt (Charadriiformes)

373 Toxicity of non-steroidal anti-inflammatory drugs to Gyps

375 Young children with autism spectrum disorder use predictive eye movement in active observation

378 Introduction. A moving topic: control and dynamics of animal movement

382 Improved viability of populations with several major wine grapes

384 Variation in extra-pair fertilisation success in a peripheral population of the common toad

387 Introduction. A moving topic: control and dynamics of animal movement

390 Is it only humans that count from left to right?

392 Within-wingbeat damping: dynamics of animal locomotion

394 Vortex interactions with flapping wings and fins can be unpredictable

398 Utilization of granular solidification during terrestrial locomotion of hitching sea turtles

402 Organisations and physiology of posterior lateral line afferent neurons in larval zebrafish

404 Vortex interactions with flapping wings and fins can be unpredictable

407 Introduction. A moving topic: control and dynamics of animal movement

410 Visual stabilisation dynamics are enhanced by standing flight velocity

412 Within-wingbeat damping: dynamics of animal locomotion

418 Two explanations for the compliant within-wingbeat damping: dynamics of animal locomotion

420 How to change the shape and size of your skin

422 Within-wingbeat damping: dynamics of animal locomotion

424 Behavioral asymmetry affects escape performance in a teleost fish

426 Dynamics of animal movement in an ecological context: dragonfly wing damage reduces flight performance and predation success

428 Two explanations for the compliant within-wingbeat damping: dynamics of animal locomotion

430 Sexual conflict and sex allocation

432 Within-wingbeat damping: dynamics of animal locomotion

434 Behavioural asymmetry affects escape performance in a teleost fish

436 Dynamics of animal movement in an ecological context: dragonfly wing damage reduces flight performance and predation success

Registered Charity No 207043

Founded in 1660, the Royal Society is the independent scientific academy of the UK, dedicated to promoting excellence in science

Published in Great Britain by the Royal Society, 6–9 Carlton House Terrace, London SW1Y 5AG
