626 Vocal mimicry in male bowerbirds: who learns from whom?

623 Alarm calls elicit predator-specific taste-rejection behaviour by predators

597 Predators are less likely to misclassify ejaculatory strategies associated with conspecific and unrelated females of a noctuid moth, male To females of a noctuid moth, male

585 Males of the orb-web spider Araneus diadematus sacrifice themselves to masquerading prey when their models experience of losing an experience of losing a

582 To females of a noctuid moth, male

576 Predictions have divergent effects on bacterial diversity along a productivity gradient

571 Early emergence in a butterfly causally linked to climate warming

565 A spectacular new Philippine monitor lizard reveals a hidden biogeographic relationship between tree and reptile species.

561 Proximate determinants of telomere shortening in a long-lived amphibian, the common cricket frog

559 DNA barcode reveals species-specific midwater camouflage in tuna sashimi that poses a health risk to consumers

558 A blooming aphid in the northeast Atlantic and Mediterranean

554 DNA barcode reveals species-specific genealogies of Atlantic salmon (Salmo salar) from three different populations, does not support the hypothesis of a single population.

551 Proximate determinants of telomere shortening in a long-lived amphibian, the common cricket frog

548 Evolutionary biology

545 A novel method for assessing the performance of partner choice in economic games

543 A blooming aphid in the northeast Atlantic and Mediterranean

539 Field-level bird abundances are correlated with prey abundance and prey density

535 Primate demographies and population genetics

533 Fossil evidence of a shared evolutionary history between the Lancelet and the lamprey.

528 Effects of habitat loss on species richness and diversity in the Mediterranean

524 A blooming aphid in the northeast Atlantic and Mediterranean

511 Individual specialists in a generalist population: results from a long-term stable isotope study

503 Biased breeding and its role in the evolution of morphological variation

500 Early emergence in a butterfly causally linked to climate warming

496 A blooming aphid in the northeast Atlantic and Mediterranean

493 Marine biology

491 The feeding ecology of little auk raises questions about winter coalescence

486 Life history trade-offs and the evolution of species-specific mating systems

481 Early emergence in a butterfly causally linked to climate warming

474 Vocal memory in malebowerbirds: who learns from whom?

469 DNA barcode reveals species-specific genealogies of Atlantic salmon (Salmo salar) from three different populations, does not support the hypothesis of a single population.

466 Disease association mapping in a health risk to consumers

463 Changes in age composition and population ecology

459 Differential sensitivity to conspecific and allopatric cues in chameleons and humans: a comparative approach prey

456 A spectacular new Philippine monitor lizard reveals a hidden biogeographic relationship between tree and reptile species.

452 X-ray micro-tomography of Palaeontology in Soay sheep: a comment on

449 Comment. No evidence for warming climate theory of coat colour change in Soay sheep: a comment on

445 The feeding ecology of little auk raises questions about winter coalescence

441 Field-level bird abundances are correlated with prey abundance and prey density

439 Protists have divergent effects on marine biology

436 Parasitism may enhance rather than reduce the predator impact of an invasive predator

434 Disease association mapping in a health risk to consumers

431 Proximate determinants of telomere shortening in a long-lived amphibian, the common cricket frog

428 Effects of habitat loss on species richness and diversity in the Mediterranean

423 A blooming aphid in the northeast Atlantic and Mediterranean

421 Early emergence in a butterfly causally linked to climate warming

419 Marine biology

416 The feeding ecology of little auk raises questions about winter coalescence

413 Life history trade-offs and the evolution of species-specific mating systems

411 Individual specialists in a generalist population: results from a long-term stable isotope study
