GUIDANCE FOR AUTHORS

Selection criteria
The criteria for selection are scientific excellence, originality and interest across disciplines within biology. Papers are assessed by the Editorial Board for suitability before full peer-review. Their recommendations are passed to the Editor. The Editor is responsible for all editorial decisions and he makes these decisions based on the reports received from the referees and the Editorial Board.

Publishing format
Biology Letters are published regularly online and in bimonthly print issues. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although the printed version of Biology Letters is limited to 2500 words, there is the facility for Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs. However, the printed version must include enough detail to satisfy the most meticulous reader. Supplementary data up to 10Mb is placed on the Society’s website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

Conditions of publication
Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the main media. Like many journals Biology Letters employs a strict embargo policy where the reporting of a scientific article by the media is embargoed until a specific time. The Editor has final authority in all matters relating to publication.

For further information on the Society’s activities, please contact the following departments on the extensions listed by dialling +44 (0)20 7839 5561, or visit the Society’s Web site (royalsociety.org).
