The extraordinary athletic performance of

Biomechanics

Invited reply. On the flexibility of lizards’

Self-agency in rhesus monkeys

Perception of male–male competition

Behavioural flexibility and problem-solving in

Post-allogrooming reductions in self-directed

Variable individual consistency in timing and

Learning and discrimination of cuticular

Cleaner wrasse mimics inflict higher costs on

Animal behaviour

Chaser swan minis inject higher costs on their models when they are more aggressive towards signal minnows

13 Bare do not use nearest-neighbour rules for optimization of multi-location routes

17 Learning and discrimination of cuticular hydrocarbons in a social insect

21 Variable individual consistency in timing and destination of winter migrating fish

24 Post-allogrooming reductions in self-directed licking by role and status in the green woodhoopoe

28 Behavioural flexibility and problem-solving in a leaping gibbon

31 Daily body temperature rhythms persist under the midnight sun but are absent during hibernation in free-living arctic ground squirrels

35 Perception of male–male competition influences Drosophila copulation behaviour

39 Inversus fetus: the green woodhoopoe

42 Comment. On the flexibility of birds’ cognition: a comment on Lead & Powell (2011)

44 Invited reply. On the flexibility of birds’ cognition: a response to Invited replies of all

Biomechanics

46 The extraordinary athletic performance of leaping gibbons

Community ecology

55 Localized reactive badge calling increases risk of biting interactions in nearby captive hawks

Conservation biology

54 Shifting the life-history paradigm: discovery of novel habitat use by hooded butterflies

57 Dangerous design: surface-trending of North Atlantic right whales increases risk of vessel collisions

Evolutionary biology

61 Pre-fledgling oxidative damage predicts survival in a large bird

64 Habitat tracking, status and survival in Hawaiian violetear hummingbirds

68 Twinning propensity and offspring destination of winter migrating fish

71 X- and Y-chromosome linked paternal effects

74 Circumventing the polydactyly ‘constraint’: a gigantic bird from the Upper Cretaceous of Central Asia

82 Selection on codon usage and base composition in

Molecular evolution

86 In the four-eyed fish (Inversus fetus), the eye-field opsin genes of aerial light do not express the same set of regions of the retina exposed to aquatic and terrestrial light

88 Variation in chimpanzee ‘culture’ is predicted

90 Latitudinal variation in light levels drives

92 Selection on codon usage and base composition in

Molecular evolution

94 Archaeopteryx-like jaws in a baleen whale

Paleontology

97 A gigantic bird from the Upper Cretaceous of Central Asia

Pathogen biology

101 The fitness of adult brain parasites

Phylogeny

104 MicroRNA support a turtle – lizard clade

Physiology

108 Incubation temperature affects multiple measures of immune competence in young wood ducks (Aix sponsa)

Special Feature

Molecular clocks

Guest edited by Andre Smith and Paul Barrett

112 Modelling the phylogenetic diversification of mammalian evolutionary patterns in the food web

115 Opinion piece. On the inference of function from structure using biomechanical modelling and simulation of extinct organisms

119 Models in palaeontological functional analysis

123 A refined modelling approach to assess the impact of immigration and dispersal: new support for declining Cretaceous dinosaur richness

127 Multi-variate models are essential for understanding vertebrate diversification in deep time

131 Remembrance of things past: modelling character compatibility: implications for morphological evolution among food taxa

135 Exploring uncertainty in the calibration of the molecular clock

139 The meaning of birth and death (in Neogene large mammals

143 Modelling rate distributions using

147 The evolutionary palaeoecology of species

151 Modelling the ecological-functional diversification of marine Metazoa on geological time scales

156 Exploring uncertainty in the calibration of the molecular clock

159 Models in palaeontological functional analysis

160 Variation in chimpanzee ‘culture’ is predicted
